PROFILE SUMMARY

Backend Developer with 3+ years of professional experience designing, developing, and scaling enterprise applications in the education-technology sector. Built and shipped an integrated academic platform from the ground up that serves 15,000+ daily users across 19 institutions, unifying previously siloed academic and finance operations into a single source of truth. Strong foundation in Laravel, PostgreSQL, Oracle, and JavaScript, with hands-on experience in large-scale data migration, API security, and system architecture. Actively expanding skills through personal projects in Node.js, Java (Spring Boot), Golang, and modern infrastructure tools. Committed contributor to engineering culture through technical documentation, requirement specifications (SRS), and mentoring junior developers.

PROFESSIONAL EXPERIENCE

Telkom Foundation (Yayasan Pendidikan Telkom)

Bandung

Backend Developer

Jan 2024 - Present

- Architected and led backend development of the foundation's first end-to-end integrated academic platform, serving 15,000+ students, 4,000+ teachers and admins, and parents across 19 schools, replacing fragmented legacy processes with a unified system.
- Designed cross-unit data integration between Education and Finance modules, eliminating manual reconciliation between departments and delivering ERP-like operational visibility (enrollment, tuition, academic records) from a single source of truth.
- Migrated 100,000+ legacy records from Oracle to PostgreSQL with zero data loss during a major platform upgrade, maintaining business continuity through carefully staged ETL and validation pipelines.
- Implemented end-to-end encryption for API payloads and sensitive database fields (student records, academic data, financial info), aligning the platform with modern data-protection standards.
- Authored 5+ comprehensive Software Requirement Specification (SRS) documents, including business process flows, UML diagrams, and Entity-Relationship Diagrams (ERDs), establishing engineering documentation standards adopted across the team.
- Built and maintained RESTful APIs and core backend services using Laravel and PostgreSQL. Tuned database queries and refactored critical modules to ensure stable performance under concurrent load.
- Mentored interns and junior developers on system architecture, secure coding practices, and code review, strengthening team capability and accelerating onboarding.

Telkom Foundation (Yayasan Pendidikan Telkom)

Bandung

Full Stack Programmer

Jan 2023 - Dec 2023

- Developed and shipped 3+ enterprise web applications used across Telkom Foundation subsidiaries, streamlining internal workflows and reducing manual administrative effort.
- Designed and implemented scalable RESTful APIs with secure authentication (JWT, role-based access control), enabling reliable system integration and real-time data exchange between internal applications.
- Built an executive analytics dashboard that aggregated academic and enrollment data pipelines, delivering real-time KPIs and actionable insights directly to the Board of Directors.
- Optimized and stabilized legacy enterprise applications by refactoring critical modules, fixing production bugs, and upgrading framework versions to improve reliability and user experience.

TECHNICAL SKILLS

Professional / Production Experience:

Languages: PHP, JavaScript, SQL, HTML, CSS

Frameworks: Laravel, Bootstrap, Tailwind CSS

Databases: PostgreSQL, Oracle Database, MySQL

Tools & Concepts: Git, Gitlab, Github, RESTful APIs, API Security & Encryption, Database Encryption, Database Design, Data Migration, Software Requirement Specification (SRS)

Personal Projects / Self Learning:

Languages: Java, Golang, Node.js

Frameworks: Spring Boot, Fiber, Nest Js

Databases: MongoDB, Elasticsearch, Redis

Technologies: Kafka, Docker, GraphQL

Other:

Languages: Indonesia Language (Native), English (Professional)

Soft Skills: Requirement Gathering, Adaptability, Clean Code & Documentation

KEY PROJECT HIGHLIGHTS

Integrated Academic & Finance Platform (Telkom Foundation)

- Scope: First-of-its-kind academic system for the foundation, covering student enrollment, academic management, tuition payments, and tracer study modules, integrated directly with the internal finance system.
- Scale: 15,000+ students, 4,000+ teachers and administrators, 19 schools.
- Stack: Laravel, PostgreSQL, Oracle, JavaScript.
- Impact: Eliminated cross-department manual reconciliation, centralized previously siloed data across Education and Finance units, and established a foundation-wide single source of truth for academic and tuition reporting.

EDUCATIONS

Bina Nusantara University

Jakarta

Bachelor of Science in Information Systems | GPA: 3.73 / 4.00

Nov 2024 - Present

- Coursework: Database Management, Software Engineering, System Analysis & Design, Enterprise Architecture.

Telkom University

Bandung

Associate's Degree in Accounting Information Systems | GPA: 3.60 / 4.00

Aug 2020 - Jul 2023

- Final Project: Developed a web application for MSMEs (Micro, Small, Medium Enterprises) to automate master data management, transaction processing, and financial report generation.
- Focus areas: Web Programming, Database Management, Business Process Automation, Financial Reporting.

AREA OF INTERESTS

Backend Development & API Design • System Architecture & Database Engineering • DevOps & Cloud Computing • Distributed Systems • Artificial Intelligence & Machine Learning
